

Energy Production/Conservation

Production

Green energy sources present a rapidly growing opportunity for companies with the technological know how to make it a reality. Wind and solar along with ethanol, bio-fuels and digesters are all areas where D&D has experience and the ability to provide significant value to leading edge technology projects.

Conservation

Energy monitoring systems help organizations and institutions save money on energy costs. Implementing them has brought energy savings of up to 45 percent to a diverse group of organizations in the industrial, commercial and institutional sectors.

Experience has proven that significant competitive advantage can be attained by knowing exactly where, when and why your business consumes energy.

Things only improve when we are able to measure them. We can help you measure your energy consumption.

Energy Solutions

If your company is looking to improve competitive advantage and grow by producing or conserving energy we can help.

D&D has wide ranging experience in monitoring and controlling your energy systems as well as in the development of new technologies to produce energy.
