

SCADA Solutions

SCADA

Supervisory Control And Data Acquisition software and systems have been quickly evolving. D&D has designed and developed everything from hardwired mimic boards to the latest leading edge software applications that drive today's lean manufacturing environments.

Applications

SCADA has applications in virtually all automated manufacturing sites and process systems. The visualization of automated systems is critical to the successful implementation of an overall control system architecture. As the control requirements become more complex it becomes increasingly important to have a SCADA package developed in the most user friendly configuration. Each technology has it's own unique advantages depending on your application. D&D has the experience in SCADA solutions to make the right choice and execute the installation flawlessly.

D&D Approach

The KISS principle is often overlooked in favor of implementing all of the latest bells and whistles but at D&D we strive to make the equipment as user friendly in the most operation conscious manner. Colours and designs must be consistent and clear to drive the necessary functionality without cumbersome features.

Improve your efficiency with a solids SCADA Solution from D&D.
