

# Siemens Total Integrated Automation

## Industry Trend

D&D works very hard at maintaining a leading edge in the development of industrial controls systems. Siemens has developed an excellent series of programmable logic controllers in the S7 product line. This platform is gaining momentum in North America and in gaining market share it requires more and more support from qualified controls integrators.

## D&D's Mandate

D&D prides itself on maintaining a leading edge position in the adaptation and adoption of new controls technology particularly for the automotive sector. Our mission to be the best company to do business with mandates that we train constantly in order to improve our abilities and offering to our clients. D&D has always been an energetic supporter of Siemens Totally Integrated Automation approach and saw the need early on to maintain our edge over our competitors with Siemens solutions. Our Internal TechLeader program was upgraded in 2002 to include the Siemens S7 platform. TechLeader is a program committed to learning for each of our employees and the expansion of our Siemens line up to include Siemens S7 into this program ensures that we will maintain a leading position.

## Implementation Benefits

Since expanding our company owned Siemens hardware platform to include S7-200, S7-300 and S7-400 into our TechLeader program we have seen a significant growth in our combined abilities and have successfully completed several projects using the S7 platform. Our specialty is controls design and integration and we are pleased to have successfully built on our knowledge and ability with Siemens Totally Integrated Automation by adding Siemens S7 to our long list of qualifications.
